

$\sin^n x$ 、 $\cos^n x$ の定積分

(例1) $I_n = \int_0^{\frac{\pi}{2}} \sin^n x dx$ ($n = 0, 1, 2, \dots$) とすると、 I_n を求めよ。

$n \geq 2$ のとき

$$\begin{aligned} I_n &= \int_0^{\frac{\pi}{2}} \sin^{n-1} x \cdot \sin x dx \\ &= \int_0^{\frac{\pi}{2}} \sin^{n-1} x \cdot (-\cos x)' dx \\ &= [-\sin^{n-1} x \cos x]_0^{\frac{\pi}{2}} + \int_0^{\frac{\pi}{2}} (n-1) \sin^{n-2} x \cos x \cdot \cos x dx \\ &= (n-1) \int_0^{\frac{\pi}{2}} \sin^{n-2} x (1 - \sin^2 x) dx \\ &= (n-1) \left(\int_0^{\frac{\pi}{2}} \sin^{n-2} x dx - \int_0^{\frac{\pi}{2}} \sin^n x dx \right) \\ &= (n-1) (I_{n-2} - I_n) \end{aligned}$$

よって

$$I_n = \frac{n-1}{n} I_{n-2} \dots \textcircled{1} \quad \leftarrow n \text{ が偶数で状況が変わる}$$

ここで

$$\begin{aligned} I_0 &= \int_0^{\frac{\pi}{2}} dx = [x]_0^{\frac{\pi}{2}} = \frac{\pi}{2} \\ I_1 &= \int_0^{\frac{\pi}{2}} \sin x dx = [-\cos x]_0^{\frac{\pi}{2}} = 1 \end{aligned}$$

(i) n が偶数のとき

$$\begin{aligned} I_n &= \frac{n-1}{n} I_{n-2} \\ &= \frac{n-1}{n} \cdot \frac{n-3}{n-2} I_{n-4} \\ &\vdots \\ &= \frac{n-1}{n} \cdot \frac{n-3}{n-2} \dots \frac{3}{4} \cdot \frac{1}{2} I_0 \\ &= \frac{n-1}{n} \cdot \frac{n-3}{n-2} \dots \frac{3}{4} \cdot \frac{1}{2} \cdot \frac{\pi}{2} \end{aligned}$$

(ii) n が奇数のとき

$$\begin{aligned} I_n &= \frac{n-1}{n} I_{n-2} \\ &= \frac{n-1}{n} \cdot \frac{n-3}{n-2} I_{n-4} \\ &\vdots \\ &= \frac{n-1}{n} \cdot \frac{n-3}{n-2} \dots \frac{4}{5} \cdot \frac{2}{3} I_1 \\ &= \frac{n-1}{n} \cdot \frac{n-3}{n-2} \dots \frac{4}{5} \cdot \frac{2}{3} \end{aligned}$$

以上より

$$I_n = \begin{cases} \frac{n-1}{n} \cdot \frac{n-3}{n-2} \dots \frac{3}{4} \cdot \frac{1}{2} \cdot \frac{\pi}{2} & (n \text{ が偶数}) \\ \frac{n-1}{n} \cdot \frac{n-3}{n-2} \dots \frac{4}{5} \cdot \frac{2}{3} & (n \text{ が奇数}) \end{cases}$$

(例2) $J_n = \int_0^{\frac{\pi}{2}} \cos^n x dx$ ($n = 0, 1, 2, \dots$) とすると、 J_n を求めよ。

$$\begin{array}{l|l} x = \frac{\pi}{2} - t \text{ とおくと} & x \Big|_0^{\frac{\pi}{2}} \rightarrow \frac{\pi}{2} \\ dx = -dt & t \Big|_{\frac{\pi}{2}}^0 \rightarrow 0 \end{array}$$

であるから

$$\begin{aligned} J_n &= \int_{\frac{\pi}{2}}^0 \cos^n \left(\frac{\pi}{2} - t \right) \cdot (-dt) \\ &= \int_0^{\frac{\pi}{2}} \sin^n t dt \\ &= \int_0^{\frac{\pi}{2}} \sin^n x dx \\ &= I_n \\ &= \begin{cases} \frac{n-1}{n} \cdot \frac{n-3}{n-2} \dots \frac{3}{4} \cdot \frac{1}{2} \cdot \frac{\pi}{2} & (n \text{ が偶数}) \\ \frac{n-1}{n} \cdot \frac{n-3}{n-2} \dots \frac{4}{5} \cdot \frac{2}{3} & (n \text{ が奇数}) \end{cases} \end{aligned}$$
